Belgium ranked 11th for HIV best practice by new EU Index

Brussels, October 13, 2009

The care and conditions for people living with HIV/AIDS in Belgium need to improve, says the Euro HIV Index (EHIVI) 2009 which was presented today in Brussels. This first survey of HIV policy and best practice ranked Belgium 11th out of 29 countries, scoring 735 points from a potential 1,000. Luxembourg wins the ranking with 857 points followed by Malta (791) and Switzerland (775).

As in the general survey regarding healthcare (Euro Health Consumer Index 2009) launched recently, Belgium just about keeps out of the top 10 but yet again does well on Access also for HIV care.

“Belgian HIV care could improve results if it would implement ‘The three ones’ principle signed in 2004 to achieve the most effective and efficient use of resources and to ensure rapid action and results-based management; the Three Ones mean:

- One agreed HIV/AIDS Action Framework that provides the basis for coordinating the work of all partners.
- One National AIDS Coordinating Authority, with a broad-based multi-sector mandate.
- One agreed country-level Monitoring and Evaluation System.

At the moment there is not a national AIDS program in Belgium; Sensoa is the core organization for care and prevention of HIV for Flanders but there is no such organization for the Walloons, nor a national one,” states Dr. Beatriz Cebolla, the Euro HIV Index Director.

“There are good prevention strategies in Belgium.

While the number of people living with HIV (PLWH) increases in every member state of the EU, budgets in several countries are reduced. Sexual risk behaviour is becoming more and more regular practice. Criminalization of HIV is a problem in many countries, and still HIV specific legislation exists in some countries; people can get prosecuted also for unintentionally and unknowingly transmitting the virus. The access to care for marginalized groups such as undocumented migrants is not guaranteed almost anywhere in Europe. Discrimination and stigma against PLWH is frequent at work and in schools. Harm reduction strategies in prisons are still weakly implemented, especially in the Eastern European countries. There is a general lack of leadership in HIV management and no government seems to know the true number of HIV-infected inhabitants. The main conclusion of the HIV Index is that there is still a lot to do.

About the Index

The EHIVI ranks the HIV situation across 28 indicators, covering 4 areas that are key to HIV: Involvement and rights, Access, Prevention, and Outcomes. The Euro HIV Index is compiled from a combination of public statistics, patient polls and independent research conducted by the founder, the Brussels-based think tank Health Consumer Powerhouse. The EHIVI 2009
Press Release

takes a patient centred position. The Index is being held in association with the Swedish EU
presidency of autumn 2009. It has received an unrestricted educational grant by Gilead
Research.

You are invited to a Netviewer session of the presentation at 10 a.m. You can participate in
